

Nationally-directed Materiel Release Orders (MROs): This measures a key SSF benefit stratified in terms of financial and readiness benefits. Financial benefits are based on totaling the dollar value of Nationally-directed (off-post) referrals made from re-distributable stock, which equate to procurement offset. All NAMI referrals result in cost avoidance, while AMI referrals may or may not result in a cost avoidance, depending on whether the items were in need or in an excess posture.

Standard/Goal: This is a metric that is monitored. There are no set standards.

R&A approach: Will report AWCF, MACOM and RIC support of MROs. Readiness benefits are captured by identifying all of those Nationally-directed referrals are made to fill issue priority group (IPG) 01 requisitions as well as velocity as measured by customer wait time. Finally, installation response time for picking, packing and shipping will also be monitored. The management trigger for this monitoring effort will be Uniform Materiel Movement and Issue Priority System (UMMIPS) standards.
